StuCommApp – Version 2.34.0 Release Notes

This document contains the general release notes for StuCommApp version 2.34.0. Please note that not all institutions use the same features, so some updates mentioned here may not be relevant to your specific app version.

These updates are part of our ongoing efforts to improve app performance, usability, and compatibility with the latest devices and operating systems. Each release includes optimisations to ensure a smoother experience for both students and staff.

If you have any questions based on these release notes, please contact the StuComm service desk via the [portal](#) or via email: support_nl@readyeducation.com.

1. Optimisations

Release 2.34.0 implements the following updates and optimizations to improve performance, compatibility, and the overall user experience.

General (Android)

- **Delay in disclaimer section during a language change:** Previously, when a user changed their phone's language, the app's disclaimer screen was not updated immediately. This caused confusion as it sometimes took several minutes for the correct translation to appear. With this release, the disclaimer now refreshes instantly when the language is changed, ensuring users always see the accurate version without unnecessary delays.
- **Exam result display:** If the mark of an exam result is prefixed by a '+' then the mark is now shown without the '+'.
- **The Jobs profile screen opens normally again :** when there is no talent profile or no valid talent profile, since 2.33.0 a bug prevented opening the Jobs start screen to create a new job profile. This has now been fixed..

General (iOS)

- *Please note that we are currently still working on a fix for a known issue related to language change behaviour on iOS. This fix is not yet included in this release but is actively being worked on by our engineering team. We will provide an update as soon as it becomes available.*
